PerfectMail Performance & Sizing Information

Performance Features

- Highly efficient code provides extremely fast performance
- Filtering occurs in real time, during message transfer
- Scale up to handle as many as 256 concurrent inbound/outbound messages
- Places little strain on physical or virtual server
- Handles 30,000+ messages/hour on a 1 vCPU VM
- Support 1,000+ users on a single CPU core
- Support 2,500+ users on a dual core CPU
- Industry leading 99.9+% accuracy, and almost no false positives
- Effective in blocking all sources of spam
- Very fast ROI, within a few weeks for most installations

Implementation Features

- Simple, 15 minute setup
- Run in Score only or Score & Filter mode
- Flexible implementation options (physical hardware, virtual hardware, managed service solutions)
- Physical hardware - works on popular desktop PCs and PC servers
- Virtual hardware - supported on VMware vSphere, Citrix XenServer and Hyper-V
- Custom Subject spam tagging
- Custom E-mail score headers
- Contact us for hosted solutions or off-site redundancy
